

Morphix Technologies

Job Description for Chemist

Position Title: Chemist

Principal Overview: Morphix Technologies is growing fast and needs world-class Chemists to help develop new products. The ideal candidate has strong track record of achieving results. Compensation will be based on experience.

Responsibilities and Output:

- Develop new chemistry-based products on-time
 - Develop and validate chemistries and sensors to meet demanding requirements
 - Plan, design and implement experiments
 - Design, set-up and operate vapor generation systems
 - Design protocols and operate laboratory equipment
 - Troubleshoot products, equipment and processes
 - Create and maintain a positive work environment
 - Work closely and seamlessly with other groups in a teaming relationship
 - Always act with high integrity and in compliance with company policies
 - Be committed to quality and safety
-

Background Experience, Skills and Education Required:

- BS Degree in Chemistry or higher
 - 4+ years related work experience (after graduation)
 - Proven track record of delivering results in independent environment
 - Demonstrated organic mechanistic (with some synthesis) chemistry skills preferred
 - Demonstrated product development skills preferred
 - Demonstrated experimental design skills
 - Lab equipment experience a plus (e.g. HPLC, UV-Vis spectroscopy, GC, FTIR)
 - Strong computer skills
 - Biological and GLP/GMP experience a plus
 - Experience in chemical sensing a plus
 - Demonstrated communication and teamwork skills
-

Morphix Technologies is an equal opportunity employer.
